

Glass in the Heat of the Moment

Contemporary

Collections Limited

Including Products From The Glass Radiator Co.

Contemporary Collections Limited

Contemporary Products for Contemporary Interiors

Why stand for ordinary when you can create an Impact? That's the philosophy at Contemporary Collections Limited.

Our unique and individual ranges are manufactured using only the highest quality materials and tested to stringent standards to ensure you only get the very best from us.

With our insight into the needs of interior designers, specifiers and architects alike, we are confident our products will complement any design.

The Glass Radiator Co. is a trading name of Contemporary Collections Limited. The glass radiator name has suited us for many years, but we have grown and the products we offer have diversified from simply radiators. Contemporary Collections Limited offers you more and everything you know and like about The Glass Radiator Co. can be found here.

GRC Clarity®

Glass in the Heat of the Moment

GRCClarity heated windows: a whole new radiant heating system supplied to you by Contemporary Collections Ltd.

Your windows are now the main heating source in your home.

This electronically heated clear glazing system efficiently heats your room. This energy efficient electric heating produces radiant heat to immerse you in a gentle warming glow. Similar to the way you feel the sun's rays.

The Benefits – Total Comfort!

- Energy Saving
- Very good thermal insulation
 - No cold draughts
 - No condensation or icing
- Gentle and even temperature
- Temperature is fully regulated
 - High electrical efficiency

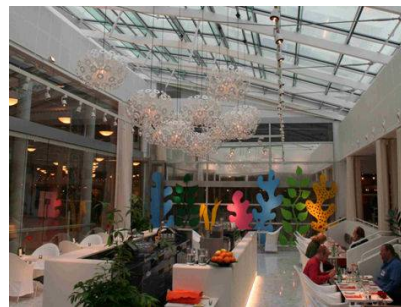

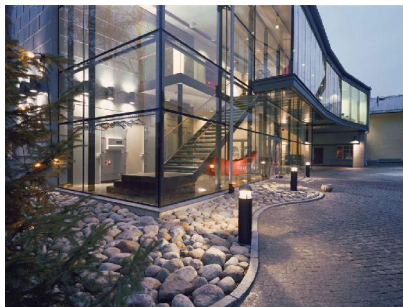

“Radiant heated windows to replace your traditional heating system!”

Sandwiched between two pieces of tempered glass is where all the clever stuff takes place. A small electrical charge applied to the glass causes electrical resistance which generates heat.

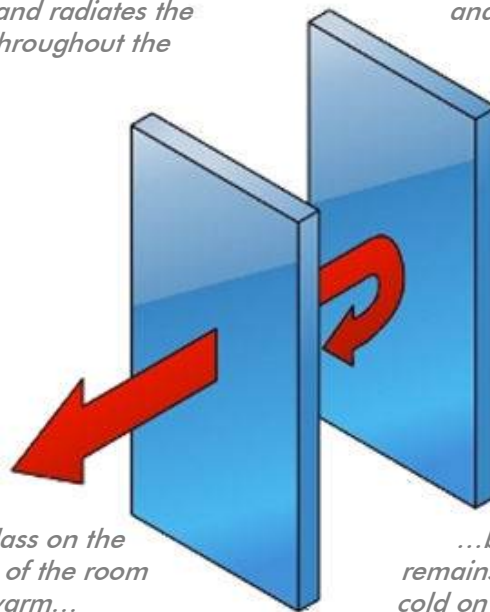

This energy efficient electric heating produces radiant heat. Radiant heat is felt by you directly, similar to the way the sun's rays warm you on a sunny day. Heat is absorbed and retained by the objects in the room so the temperature remains comfortable and you feel warmer.

In the colder months GRC Clarity keeps the room insulated and cosy, while keeping the room cool during the hotter months.

The inside pane is the heating pane. An invisible film heats the glass and radiates the heat throughout the room.

The outer pane has an insulating coating which reflects the heat back in and prevents it escaping.

The glass on the inside of the room gets warm...

...but the glass remains completely cold on the outside.

Use Less Energy

Radiant heat is absorbed into the room, by the walls, floor and ceiling and objects. The heat is retained in the room for longer so you stay warmer.

Healthier Heating

GRC Clarity causes no air drafts so dust and allergens are not blown around. Great news for allergy sufferers. The glass reflects harmful UV rays so you can enjoy the sun without the damaging effects.

Goodbye Condensation

Moisture can cause real damage, especially in colder months. GRC Clarity completely eliminates condensations and icing.

In Safe Hands

Tempered glass is 5x stronger than the glass in a typical window. GRC Clarity can be fitted with a home security system, in the event of a break-in the alarm is triggered by the glass being broken.

Windows, doors, ceilings, conservatories or a glass wall. Where ever you might use glass you can use gRCClarity and heat the room.

To control heated windows our competitors use large transformers and unsightly housing for the electronics. gRCClarity are manufactured by Saint Gobain, one of the largest glass manufacturers in the world. All units are cleverly designed to run on a small transformer.

gRCClarity provide perfect comfort for both new and refurbished buildings, offices, restaurants, spas, laboratories, conservatories, schools, residential buildings, inside swimming, pool rooms and winter gardens.

This amazing electric heating system can act as the security system, sounding the alarm instantly should the glazing be broken. Optional coatings can be applied to the glass to keep it clear in any condition, from the self cleaning Bioclean application to a privacy glass system similar to our other innovative glass system, gRCSwitch.

Environmental Policy

It's everybody's job to look after the environment and live a little greener.

The Waste Electrical and Electronic Equipment (WEEE) regulations became European and UK law in 2007. All importers who put electrical products onto the UK market must adhere to this directive.

Contemporary Collections Limited provides a recycling facility for consumers to use when our products come to the end of their life and you are upgrading or replacing them. We will collect the product when the new one is delivered with no collection cost to the end customer and will return the product to be recycled.
